

# Protect your formulation

06 | 2019

**Nowaday's formulations are highly sophisticated and complex. Carefully chosen emollients, precious natural compounds, colors and artfully created scents may oxidize just too soon. Additionally transparent packagings let harmful UV light penetrate into the formulation. As a result stability is not always guaranteed. Our broad portfolio of stabilisers offers essential tools to cope with different formulation challenges.**

BASF offers a broad choice of products and technologies stabilising formulations and protect from photolytic and/or photoxidative degradation. They are highly effective especially due to the synergies like the combination of UV Absorbers and "Excited State Quenchers".

## ANTIOXIDANTS

Non-yellowing, high performance phenolic antioxidants and unique non-phenolic specialty antioxidants.

- Tinogard® TT
- Tinogard® TT DD
- Tinogard® TS
- Tinogard® DA

## UV ABSORBERS

Broadband UV absorbers that specifically match the needs of formulations in transparent packaging.

- Tinogard® HS
- Cibafast® H Liq.
- Tinogard® TL

## EXCITED STATE QUENCHERS

Unique technology that boosts the efficacy of UV absorbers resulting in highly effective stabilizing systems.

- Tinogard® Q
